
ALTEA
Aircraft | inside & out

Same plane. New moods.

CABIN REFURBISHMENT: an ultra-luxe finish with a touch of home comfort? An airborne office with a fine-dining twist? ALTEA transforms interior spaces from Mid-size Jets to ACJs with an assured and knowledgeable touch.

"The key is advanced planning. It's great to have an idea of what you want – but spend time planning a minimum of eight months in advance, and always be ready to listen to fact-based advice."

ROBIN DUNLOP
Founding Partner, ALTEA

ALTEA understands aircraft inside and out. As business jet advisors with decades of experience consulting with aircraft owners, its expertise encompasses asset sales and acquisition, through to design and complete outfitting of new aircraft, across the whole spectrum of interior and exterior completion, refurbishment and transition management. From aircraft connectivity to fresh coffee onboard, bathrooms to bedtimes – how to factor in tailored requirements, innovative lighting, specific new technologies, and sustainable materials – everything is considered.

ALTEA's recent projects cover the Bombardier Global series and Dassault Falcon jets. These large cabin aircraft can be refurbished efficiently with contemporary, individual style and maximum in-flight comfort in mind. In addition, the global ACJ fleet is in ALTEA's sights. "We have a reputation for excellence in this sector with both private and governmental aircraft in our portfolio," says Dunlop. "Our market intelligence tells us that there are many in-depth maintenance checks on the horizon for ACJ320 family owners – with early planning it's the perfect opportunity to refurbish in the most cost-effective and efficient way. We have perfected processes and deep technical know-how to address this market demand with practical insight."

DAYLIGHT
Bright, open, focused.

GOLDEN HOUR
Warm, welcoming, relaxed.

NIGHT MODE
Calm, private, restorative.

CASE STUDY

Runner up with 'HYGGE' concept in FlexJet's design project for Gulfstream 650

Demonstrating how the mood can change on a 'Night flight to Paris' the ALTEA team showed how the sensitive use of textiles combined with ambient lighting effects conjured up an aircraft interior as beautiful as it was practical. "Every fit-out and refurbishment is a triumphant blend of versatility and practicality over space and cost. Then you sprinkle the magic," says Dunlop.
